How to have if else operation in HP OO

Other options in OO Studio (traditional AFL content, not CloudSlang):

a) operations like String Comparator, String Equals, Double Comparator, can be seen as 'if' with the two (or more) responses as 'then' and 'else'; and on the else add more 'if' operation

b) create a custom operation: use scriplet (or response rules); use as reference other operations based on Do Nothing (like Double Comparator and String Equals) . More complex to create the first one, but more compact and nicer result
